

Ben Bodan, IoT Expert, Developer

Ben Bodan, is a developer who has been exposed to different technologies and disciplines across his studies at the Dept. Automation Engineering of the Technical University of Piraeus. Between 2012 and 20016 he has been involved in all stages of web development from initial design and architecture to development, deployment, and management of custom web applications. From 2016 till now he designed, developed, and tested safety critical C language firmware for industrial applications as well as low level drivers for agricultural, industrial sensors, BT, Lora Wan etc. He worked closely with engineering to review manufacturing changes and validate designs before tape out. Most of the projects he participated in involved the development and implementation of effective cutting edge solutions focused on scalability and sustainability.
